

Exception Handling

Exception

→ A recoverable / handleable abnormal condition that occurs during program execution.

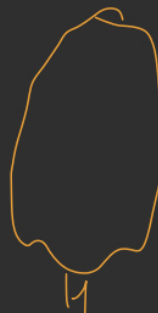

→ Object

File is missing →
wrong I/P →
Divide by zero →

int num = a / (b);

Errors (Object)

→ Out of Memory Error
→ Stack Overflow Error

How to Handle?

Exception Handling (x)

↳ JVM decides Everything

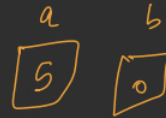

→ flow of Control

→ Debugging

→ User Experience

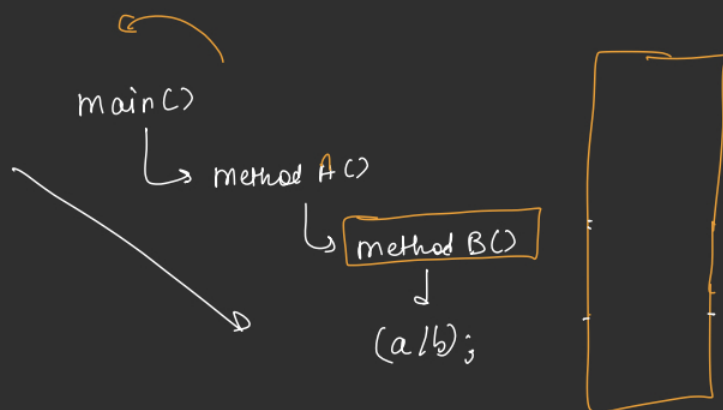

```
int a = 5  
int b = 0
```

```
System.out.println(a/b);
```

JVM: `new ArithmeticException("/ by Zero");`

Default Exception Handling

Stack Trace

Goal:

↳ When an Exception occurs, don't crash.
Handle it & continue.

```
try {  
    int a = 5;  
    int b = 0;  
    sys0(a/b);  
}
```

Risky
code

```
catch (Exception e) {  
}
```

Preventive
code
